step

leftEndpoint

DT_Model_Descr_CubicBSpline

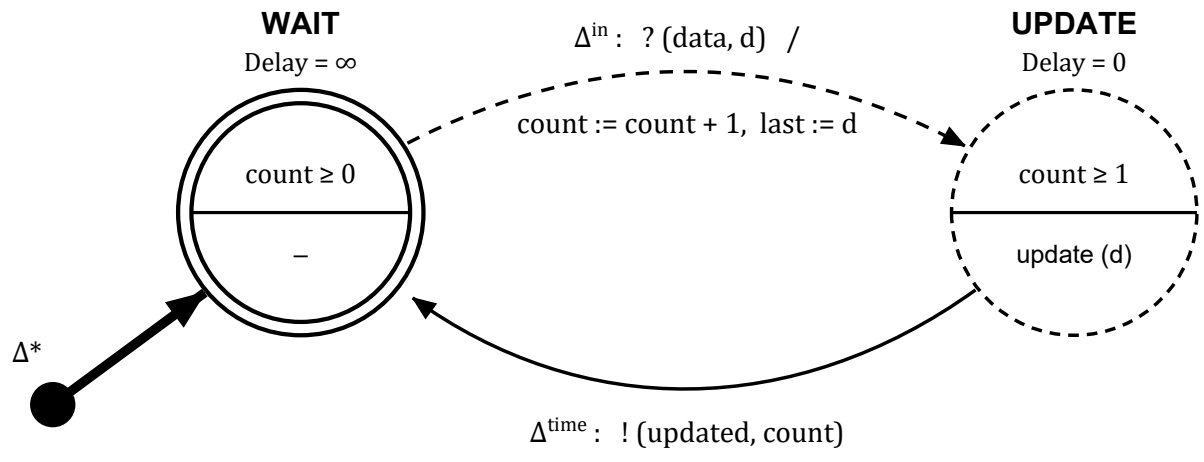

$\mathcal{M} = \langle \Lambda, X, Y, \Sigma, \Phi, \Delta, \Delta^* \rangle$ $\Lambda = \{step, leftEndpoint\}$ $X = \{data\}$ $Y = \{updated\}$ $\Sigma = \{count, last\}$

data $\in \mathbb{R}$

count	(number of control points)	where count $\in \mathbb{N}$
last	(last value assimilated)	where last $\in \mathbb{R}$

update (d)
getSineModelValue (x)

updated $\in \mathbb{N}$

threshold

DT_Service_Diagnosis_Sine

$\mathcal{S} = \langle \Lambda, X, Y, \Sigma, \Phi, \Delta, \Delta^* \rangle$ $\Lambda = \{threshold\}$ $X = \{data\}$ $Y = \{anomaly\}$ $\Sigma = \{residual\}$

data $\in \mathbb{R}$

residual	(distance between the measured and the model value)	where residual ≥ 0

residualOf (d)
executeService ( )

anomaly $\in \mathbb{R}$
